MySQL, Oracle, PostgreSQL, SQL Server, HIRDB

📊 Work Experience

株式会社Q&F (2021/4 - current)
Full Stack Software Engineer

- Developing order management system
- Developing file store system
- Reconstructing frontend source code
- Customizing ORM framework

株式会社GSD (2020/4 - 2021/3)
Backend Software Engineer

- Upgrading of the tourism reservation platform
- Development of the bank transaction monitor
- Development of the order management system

株式会社CPS (2019/2 - 2020/3)
Backend Software Engineer

- Development of the log format system
- Upgrading of the Online shop system
- Developing of the game check system

📋 Education

Bachelor: Financial Management
Period: 2013 - 2017
University: YunCheng University

Online Shop File Management System

Project description : This system is used to manipulate the files, related to business, stored in aws s3. It can upload, download files from the s3 and also can directly delete.

Period : 2021/6 - present

Duties :
- Writing application design and coding
- Creating react.js components
- Fixing bugs and answering QA
- Reviewing source code and application design
- Releasing and deployment

Tech Stack : Java11, PostgreSQL, Spring Boot, Spring Data JPA, Git/Github, React, TypeScript, AWS, CI/CD, Gradle, Node.js

Online Shop Orders Management Platform

Project description : The platform consists of several parts, for example: order management, stock management, customer management, etc. I was in charge of backorder management. The main work flow of backorder management; getting order data from another server; then checking whether if orders need backorder services and updating the data status. Next, completion of data checks and finally, sending of valid data to aws S3 storage.

Period : 2020/12 - present

Duties :
- Writing application design and coding
- Creating common vue components
- Writing Junit test
- Fixing bugs and answering QA
- Reviewing source code and application design
- Releasing and deployment

Tech Stack : Java11, PostgreSQL, Spring Boot, Spring Data JPA, Git/Github, Vue, TypeScript, AWS, CI/CD, Flyway, Gradle

Bank Transactions Monitoring System

Project description : This system monitors bank users' transactions, which uses different conditions to check whether if users have suspicious transactions and inserts the transaction id into a table that is used to check who is suspicious.

Period : 2020/10 - 2020/11

Duties :
- Writing application design and coding
- Fixing bugs and answering QA
- Reviewing source code and application design

Tech Stack : Java8, SQL Server, Spring Boot, Spring Batch, Git/Github

Overseas Trip Hotel Reservation Platform

Project description : The tourism companies can use this platform to reserve hotels, customize trip courses and buy airplane tickets.

Period : 2020/7 - 2020/9

Duties :
- Creating new pages and writing server side code
- Writing unit test design and testing
- Importing Google Maps into current system

Tech Stack : Java8, Oracle, JSP, SVN, JavaScript, Struts1, Google Maps

Game Encrypt Check Platform

Project description : This platform system is used to check whether if a game is encrypted properly. All the checks need to be done before the game is published.

Period : 2019/10 - 2020/3

Duties :
- Developing RESTful API
- Writing Junit tests
- Creating application designs
- Reviewing source code
- Sharing thoughts in the study group

Tech Stack : Java8, MySQL, Git/Github, AWS, Neuron, Ubuntu, Docker, Jira

Food Online Shop

Project description : This is a B2B food online shop system that needed modification to meet the sale tax changing from 8% to 10% in 2019.

Period : 2019/5 - 2019/9

Duties :
- Modifying existing pages and server side logic
- Writing test documents and doing unit test
- Fixing bugs and answering QA

Tech Stack : Java, VB.NET, Tomcat, Linux, HiRDB, SVN, FTP

Window Batch System

Project description : This system deals with the logs from the other servers, deleting unnecessary parts and formating these logs, sending them to another server.

Period : 2019/2 - 2019/4

Duties :
- Writing design and test documents
- Explaining specification for coding team

Tech Stack : Window Batch, Excel, Senjun
